Powder Technology 101 (1999) 304–307

POWDER TECHNOLOGY

Subject Index of Volume 101

Additive
Effect of grinding aids on the time-flow characteristics of the ground product from a batch ball mill, 31
Adsorption
Peptide affinity chromatography process for adsorption of fibrinogen, 173
Affinity chromatography
Peptide affinity chromatography process for adsorption of fibrinogen, 173
Agglomerate fluidization
Estimation of agglomerate size for cohesive particles during fluidization, 57
Agglomerate size
Estimation of agglomerate size for cohesive particles during fluidization, 57
Agglomeration
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Aggregation
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Air–solid flow
Use of an isokinetic sampling probe. Results in a cyclone, 81
Analytical model
Simulation of grinding in a shaker ball mill, 63
Anisotropy of Reynolds stress
Anisotropic behavior of the Reynolds stress in gas and gas–solid flows in cyclones, 108
Aragonite
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Average flow solids rate
Study on the flow of fine powders from hoppers connected to a moving-bed standpipe with negative pressure gradient, 266

Ball mill
Effect of grinding aids on the time-flow characteristics of the ground product from a batch ball mill, 31
Batch sedimentation
Study on batch sedimentation simulation — establishment of constitutive equations, 157
Bubbles
Experimental determination of bubble size distributions in bubble columns: prediction of mean bubble diameter and gas hold up, 142
n-Butanol
Preparation of nanometer titanium oxide with *n*-butanol supercritical drying, 205

$CaCO_3$
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Cake filtration
Influence of gas velocity on cake formation and detachment, 165
Calcite
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Carbonation
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Chemical vapor deposition (CVD)
Local modeling of mass transfer with chemical reactions in a gas–solid fluidized bed. Application to the chemical vapor deposition of silicon from silanes, 43
Circulating fluidized beds
Two distinctive variational regions of radial particle concentration profiles in circulating fluidized bed risers, 91
Quantitative estimation of solids holdups at dense and dilute regions of circulating fluidized beds, 183
Circulation
The dynamics of large particles in a four-compartment interconnected fluidized bed, 229
Coalescense
A visual kinematic model of flowing foams incorporating coalescence, 249
Cohesion
A new approach for the measurement of the tensile strength of powders, 7
Cohesive particles
Estimation of agglomerate size for cohesive particles during fluidization, 57
Compaction
Modelling to understand porosity and specific surface area changes during tabletting, 240
Compartmented fluidized bed
Solid circulation in a compartmented gas fluidized bed, 191
Computational fluid dynamics
Anisotropic behavior of the Reynolds stress in gas and gas–solid flows in cyclones, 108
Concentration measurement
Use of an isokinetic sampling probe. Results in a cyclone, 81
Constant volume
Evaluation of the computer controlled dynamic yield locus tester, 257
Constitutive equations
Study on batch sedimentation simulation — establishment of constitutive equations, 157
Crystal growth
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Cyclone
Use of an isokinetic sampling probe. Results in a cyclone, 81

Damping
Preparation, viscosity and damping of functional fluids that respond to both magnetic and electric fields, 279

Elsevier Science S.A.
PII: S0032-5910(99)00006-6

Dense region
Quantitative estimation of solids holdups at dense and dilute regions of circulating fluidized beds, 183
Dilute region
Quantitative estimation of solids holdups at dense and dilute regions of circulating fluidized beds, 183
Distribution
The dynamics of large particles in a four-compartment interconnected fluidized bed, 229
Drug release
Preparation of microspheres of ketoprofen with acrylic polymers by a quasi-emulsion solvent diffusion method, 120
Dynamic yield locus tester
Evaluation of the computer controlled dynamic yield locus tester, 257

Electromagnetic field
Preparation, viscosity and damping of functional fluids that respond to both magnetic and electric fields, 279
ER fluid
Preparation, viscosity and damping of functional fluids that respond to both magnetic and electric fields, 279

Fabric filters
Influence of gas velocity on cake formation and detachment, 165
Fibrinogen
Peptide affinity chromatography process for adsorption of fibrinogen, 173
Fine grinding
Effect of grinding aids on the time-flow characteristics of the ground product from a batch ball mill, 31
Fine mineral particles
Effects of nonpolar oil on hydrophobic flocculation of hematite and rhodochrosite fines, 73
Flocculated suspension
Study on batch sedimentation simulation — establishment of constitutive equations, 157
Flocculation kinetics
Effects of nonpolar oil on hydrophobic flocculation of hematite and rhodochrosite fines, 73
Flowing foams
A visual kinematic model of flowing foams incorporating coalescence, 249
Flow parameters
Effect of grinding aids on the time-flow characteristics of the ground product from a batch ball mill, 31
Flow regimes
Study on the flow of fine powders from hoppers connected to a moving-bed standpipe with negative pressure gradient, 266
Fluidized bed
Local mass transfer coefficients around a cylinder in a fluidized bed, 134
A theoretical investigation of gas–solid flow exiting a fluidized bed into a standpipe, 211
Force balance model
Estimation of agglomerate size for cohesive particles during fluidization, 57
Functional fluid
Preparation, viscosity and damping of functional fluids that respond to both magnetic and electric fields, 279

Gas cleaning
Influence of gas velocity on cake formation and detachment, 165
Gas flow in cyclones
Anisotropic behavior of the Reynolds stress in gas and gas–solid flows in cyclones, 108
Gas hold up
Experimental determination of bubble size distributions in bubble columns: prediction of mean bubble diameter and gas hold up, 142
Gas-particle mixture
A theoretical investigation of gas–solid flow exiting a fluidized bed into a standpipe, 211
Gas–solid flow
A theoretical investigation of gas–solid flow exiting a fluidized bed into a standpipe, 211
Gas–solid fluidized bed
Local modeling of mass transfer with chemical reactions in a gas–solid fluidized bed. Application to the chemical vapor deposition of silicon from silanes, 43
Granular flow
A theoretical investigation of gas–solid flow exiting a fluidized bed into a standpipe, 211
Grinding model
Simulation of grinding in a shaker ball mill, 63

Hopper
Study on the flow of fine powders from hoppers connected to a moving-bed standpipe with negative pressure gradient, 266
Hydrodynamics
Two distinctive variational regions of radial particle concentration profiles in circulating fluidized bed risers, 91
Hydrophobic adhesion force
Effects of nonpolar oil on hydrophobic flocculation of hematite and rhodochrosite fines, 73
Hydrophobic flocculation
Effects of nonpolar oil on hydrophobic flocculation of hematite and rhodochrosite fines, 73

Image analysis
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Interconnected fluidized bed
The dynamics of large particles in a four-compartment interconnected fluidized bed, 229
Interparticulate forces
A new approach for the measurement of the tensile strength of powders, 7
Isokinetic sampling probe
Use of an isokinetic sampling probe. Results in a cyclone, 81

Janssen's model
Load diversion by embedding in crushed salt. Experimental results, Part I, 17
Jenike flow factor tester
Effect of grinding aids on the time-flow characteristics of the ground product from a batch ball mill, 31
Jenike shear cell
A new approach for the measurement of the tensile strength of powders, 7
Evaluation of the computer controlled dynamic yield locus tester, 257

Kerosene
Effects of nonpolar oil on hydrophobic flocculation of hematite and rhodochrosite fines, 73

Large particles
The dynamics of large particles in a four-compartment interconnected fluidized bed, 229
Lateral pressure coefficient
Load diversion by embedding in crushed salt. Experimental results, Part I, 17
Local mass transfer coefficient
Local mass transfer coefficients around a cylinder in a fluidized bed, 134

Local modeling
Local modeling of mass transfer with chemical reactions in a gas–solid fluidized bed. Application to the chemical vapor deposition of silicon from silanes, 43

Magnetic fluid
Preparation, viscosity and damping of functional fluids that respond to both magnetic and electric fields, 279
Mass transfer
Local modeling of mass transfer with chemical reactions in a gas–solid fluidized bed. Application to the chemical vapor deposition of silicon from silanes, 43
Local mass transfer coefficients around a cylinder in a fluidized bed, 134
Microencapsulation
Preparation of microspheres of ketoprofen with acrylic polymers by a quasi-emulsion solvent diffusion method, 120
Microspheres
Preparation of microspheres of ketoprofen with acrylic polymers by a quasi-emulsion solvent diffusion method, 120
Modeling
Two distinctive variational regions of radial particle concentration profiles in circulating fluidized bed risers, 91
Modelling
Modelling to understand porosity and specific surface area changes during tabletting, 240
Molecular dynamics simulation
Simulation of grinding in a shaker ball mill, 63
Morphology
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Moving-bed standpipe
Study on the flow of fine powders from hoppers connected to a moving-bed standpipe with negative pressure gradient, 266

Nanometer particle
Preparation of nanometer titanium oxide with *n*-butanol supercritical drying, 205
Naphthalene sublimation
Local mass transfer coefficients around a cylinder in a fluidized bed, 134
Negative pressure gradient
Study on the flow of fine powders from hoppers connected to a moving-bed standpipe with negative pressure gradient, 266
Non-spherical
Drag on non-spherical particles: an evaluation of available methods, 288

Oil shale
Operating conditions for oil shale thermogravimetry, 151
Optimization
Simulation of grinding in a shaker ball mill, 63

Particle concentration
Two distinctive variational regions of radial particle concentration profiles in circulating fluidized bed risers, 91
Particle drag coefficient
Drag on non-spherical particles: an evaluation of available methods, 288
Particle removal
Influence of gas velocity on cake formation and detachment, 165
Peptide libraries
Peptide affinity chromatography process for adsorption of fibrinogen, 173
Permeability
Study on batch sedimentation simulation — establishment of constitutive equations, 157
Pore
X-ray microtomography to characterize the physical properties of soil and particulate systems, 178
Porosity
A new approach for the measurement of the tensile strength of powders, 7
Modelling to understand porosity and specific surface area changes during tabletting, 240
Porous system
X-ray microtomography to characterize the physical properties of soil and particulate systems, 178
Porous system microtomography
X-ray microtomography to characterize the physical properties of soil and particulate systems, 178
Positron emission particle tracking
The dynamics of large particles in a four-compartment interconnected fluidized bed, 229
Precipitation
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Proteins
Peptide affinity chromatography process for adsorption of fibrinogen, 173

Radial distribution
Two distinctive variational regions of radial particle concentration profiles in circulating fluidized bed risers, 91
Regime transition
Two distinctive variational regions of radial particle concentration profiles in circulating fluidized bed risers, 91
Reynolds number
Drag on non-spherical particles: an evaluation of available methods, 288

Semihydrostatic model
Load diversion by embedding in crushed salt. Experimental results, Part I, 17
Shaker ball mill
Simulation of grinding in a shaker ball mill, 63
Silanes pyrolysis
Local modeling of mass transfer with chemical reactions in a gas–solid fluidized bed. Application to the chemical vapor deposition of silicon from silanes, 43
Silicon deposition
Local modeling of mass transfer with chemical reactions in a gas–solid fluidized bed. Application to the chemical vapor deposition of silicon from silanes, 43
Silo theory
Load diversion by embedding in crushed salt. Experimental results, Part I, 17
Size distribution
Experimental determination of bubble size distributions in bubble columns: prediction of mean bubble diameter and gas hold up, 142
Size measurement
Experimental determination of bubble size distributions in bubble columns: prediction of mean bubble diameter and gas hold up, 142
Soil
X-ray microtomography to characterize the physical properties of soil and particulate systems, 178
Solid circulation
Solid circulation in a compartmented gas fluidized bed, 191
Solid pressure
Study on batch sedimentation simulation — establishment of constitutive equations, 157

Solids holdup
Quantitative estimation of solids holdups at dense and dilute regions of circulating fluidized beds, 183
Specific surface area
Modelling to understand porosity and specific surface area changes during tabletting, 240
Spherical crystallization
Preparation of microspheres of ketoprofen with acrylic polymers by a quasi-emulsion solvent diffusion method, 120
Sphericity
Drag on non-spherical particles: an evaluation of available methods, 288
Standpipe
A theoretical investigation of gas–solid flow exiting a fluidized bed into a standpipe, 211
Statistical model
Simulation of grinding in a shaker ball mill, 63
Supercritical drying preparation
Preparation of nanometer titanium oxide with *n*-butanol supercritical drying, 205

Tensile strength
A new approach for the measurement of the tensile strength of powders, 7
Tensile strength tester
A new approach for the measurement of the tensile strength of powders, 7
Terminal velocity
Drag on non-spherical particles: an evaluation of available methods, 288
Thermogravimetric apparatus
Operating conditions for oil shale thermogravimetry, 151
Thermogravimetry operating conditions
Operating conditions for oil shale thermogravimetry, 151
Titanium oxide
Preparation of nanometer titanium oxide with *n*-butanol supercritical drying, 205

Vaterite
Morphological development in calcium carbonate precipitation by the ethanolamine process, 1
Vertical pressure
Load diversion by embedding in crushed salt. Experimental results, Part I, 17
Viscosity
Preparation, viscosity and damping of functional fluids that respond to both magnetic and electric fields, 279
Visual kinematic model
A visual kinematic model of flowing foams incorporating coalescence, 249
V-valve and riser
Solid circulation in a compartmented gas fluidized bed, 191

X-ray microtomography
X-ray microtomography to characterize the physical properties of soil and particulate systems, 178
